

Assignment – 4

Assignment Date	04/11/2022
Student Name	Lokeswar RR
Student Roll Number	311119104040
Maximum Marks	2 marks

Question-1:

Pull an Image from docker hub and run it in docker playground.

Solution:

- Pull an image *uifd/ui-for-docker* from the docker hub
- This image is used for viewing and managing the docker engine
- Use docker pull image_name and docker run -it image_name commands to • Run the above image in the Docker Playground

The screenshot shows the Docker Playground interface. On the left, there's a sidebar with a clock showing 03:57:32, a 'CLOSE SESSION' button, and an 'Instances' section with a list of instances (192.168.0.8, node1). The main area displays the instance details for 'cddvkms0_cddvkvm0qau000a07j5g', including IP (192.168.0.8), Memory (1.24% / 49.52MIB / 3.906GIB), and CPU (0.31%). Below this, there's an SSH terminal window with the following content:

```
#####  
# WARNING!!!!  
# This is a sandbox environment. Using personal credentials  
# is HIGHLY discouraged. Any consequences of doing so are  
# completely the user's responsibilities.  
#  
# The PwD team.  
#####  
[node1] (local) root@192.168.0.8 ~  
$ docker pull hello-world  
Using default tag: latest  
latest: Pulling from library/hello-world  
2db29710123e: Pull complete  
Digest: sha256:e18f0a777aefabe047a671ab3ec3eed05414477c951ab1a6f352a06974245fe7  
Status: Downloaded newer image for hello-world:latest  
docker.io/library/hello-world:latest  
[node1] (local) root@192.168.0.8 ~  
$ docker run hello-world
```

At the bottom right, there's a message: 'Activate Windows Go to Settings to activate Windows.'

Question-2:

Create a docker file for the job portal application and deploy it in Docker desktop application.

Solution:

- Create a docker file for build and deploy flask app.
- Use docker build -t image_name. In the current directory to start building the
- docker image and deploy in our local docker
- Use docker run -p 5000:5000 image_name to run in local system

CODE

FROM ubuntu/apache2

FROM python

COPY ./requirements.txt /flaskApp/requirements.txt

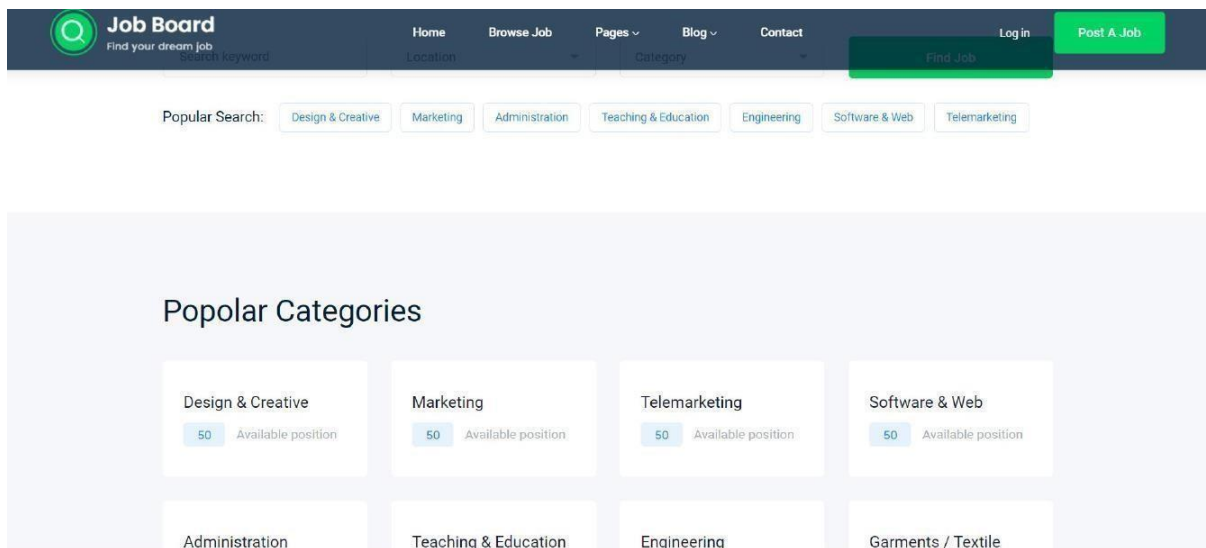

WORKDIR /flaskApp

RUN pip install -r requirements.txt

COPY . /flaskApp

ENTRYPOINT ["python"]

CMD ["app.py"]

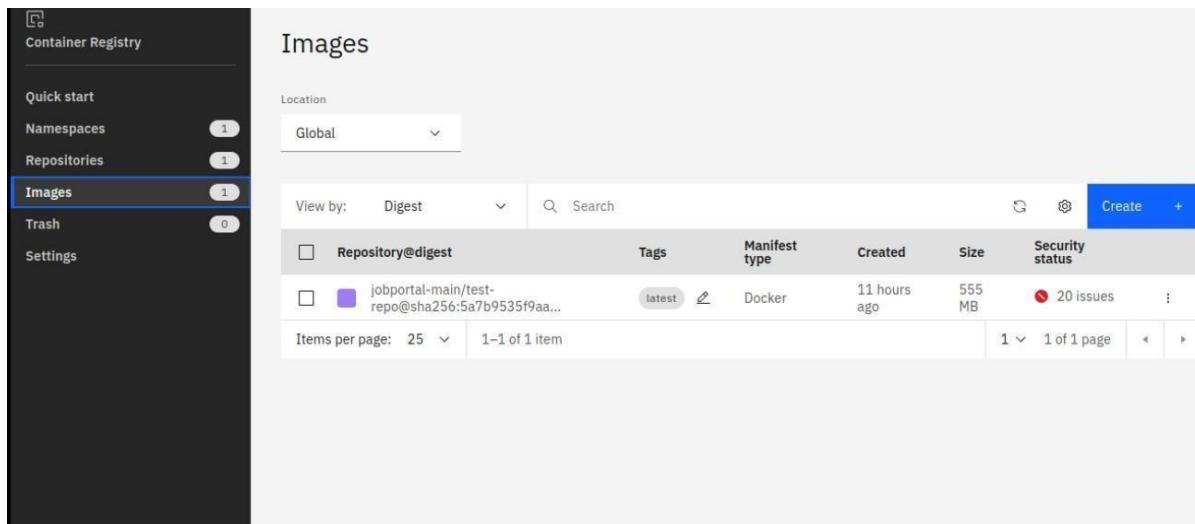

Question-3:

Create a IBM container registry and deploy hello world app or job portal app.

Solution:

- Log into IBM cloud
 - Create a container registry
 - Using IBM Cloud CLI, install the container registry plugin in our system
 - Push our docker image into the created container registry using docker push
- So, our job portal app is deployed in the IBM container registry

OUTPUT:

“HELLO WORLD”

Question-4:

Create a Kubernetes cluster in IBM cloud and deploy hello world image or job portal image and also expose the same app to run in node port.

Solution:

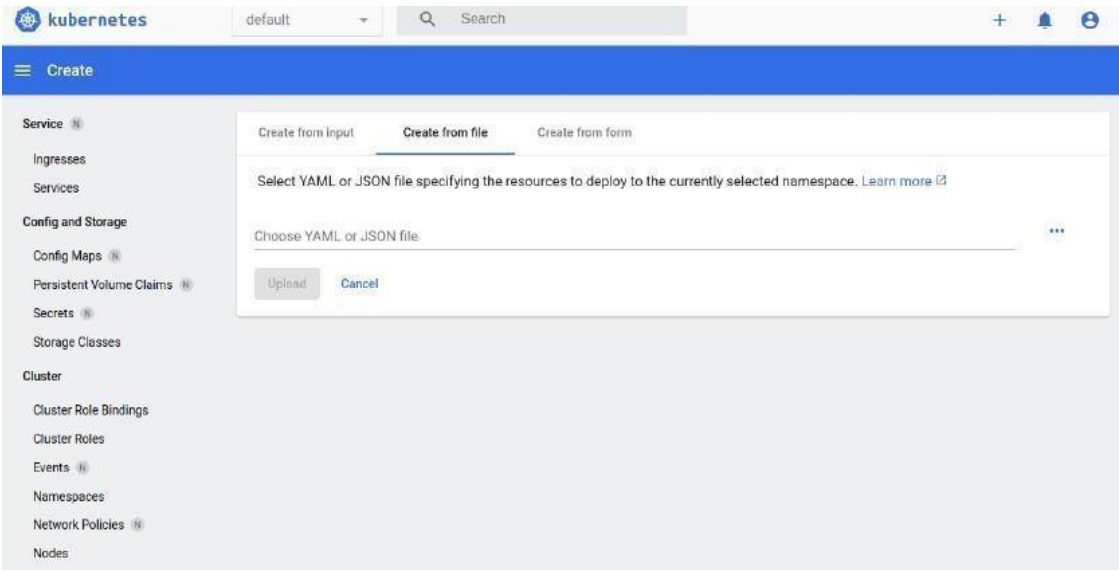

- Log into IBM cloud
- Create a kubernetes
- Using IBM Cloud CLI, install the ks plugin in our system
- Create a cluster in the kubernetes
- Now, go to the kubernetes dashboard where we need to create a service based on a ●
yml file (given below)
- In that file, we have to mention *which image we are going to use* and the *app name*
- Take the public IP address and Nodeport since we exposed the *flask app in nodeport*
- Finally, we got the url address where our flask app is hosted

CODE:

```
apiVersion: v1 kind:
Service metadata:
name: job-portal-app
spec: selector:
app: job-portal-app
ports: - port: 5000
type: NodePort
---
apiVersion: apps/v1
kind: Deployment
```

metadata:
name: job-portal-app
labels:
app: job-portal-app
spec: selector:
matchLabels: app:
job-portal-app
replicas: 1
template:
metadata: labels:
app: job-portal-app
spec: containers:
- name: job-portal-app
image: image_name
ports:
- containerPort: 5000
env:
- name:
DISABLE_WEB_APP
value:

"false"
